

Pump outs

QUA-VAC offers fully automated sewage pump-out systems with optional software solutions as well as optional card access control.

The Pump-Out product line is an electronically controlled, vacuum pump-out, powered by a rotary vane pump.

QUA-VAC offers the most technologically advanced sewage pump-out system on the market. The sewage pump-out units is a fully automated system which operates on vacuum as well as pressure.

There are no moving parts to come into contact with the effluent. This means no broken diaphragms, jammed impellers or flapper valves to contend with. Therefore, the unit Will Not Jam and requires No Priming.

These pump-out units not only replaces outdated rotary and diaphragm pumps but highly exceeds the capabilities of all other pump-outs.

Just as easy as using a gas pump.

Investing in a Vacuum pump-out means making the right choice for the best results.

Standard features

- * 25' intake hose assembly (includes ball valve and coupler).
- * 1 1/4" and 1 1/2" deck fittings.
