

Marine systems

QUA-VAC B.V. MARINE is your partner for simple but highly efficient solutions.

Why VACUUM? Because it can transport sewage horizontal and even upwards over a great distance without any problems.

The VACUUM basic principles are easy. The QUA-VAC/EVAC vacuum toilet system uses vacuum to transport sewage from EVAC toilet bowls, Squatting toilets, Greywatertanks and other sanitary fittings to a central point. VACUUM is created by recirculating the sewage through an ejector, fitted to the collecting tank.

The VACUUM piping is easy to install, with a piping diameter of 50 up to 75 mm. On board of ships, piping can run upwards and easy around obstacles.

The VACUUM maintenance is easy. You can service all the toilets from the front and the piping system is easy to keep clean with a dosing system.

Vacuum units:

- * QUA-VAC/EVAC Vacuum collecting units.
- * QUA-VAC/EVAC Easy Fits.
- * QUA-VAC/AQUAMAR Combined sewage treatment units.
- * QUA-VAC/AQUAMAR Sewage treatment units.

Vacuum toilets:

- * EVAC 900 Floor and Wall model.
- * EVAC-90 Floor and Wall model.
- * Squatting toilet.
- * QUA-VAC vacuum urinal.

Greywatertanks.

- * Dosing units:
- * Dosing unit MDQ98.
- * Vacuclean strong.
- * Vacuclean light.

Why QUA-VAC? Because we can supply you with any simple solution for problems that you may have with your BLACKWATER or GREYWATER on board of your vessel.

QUA-VAC B.V. has already equipped more than a 1000 ships with a vacuum toilet system passed the last decade.

QUA-VAC B.V. will supply you with all the correct data. On paper as well as on AUTO-CAD we can do the work if you need the help.

QUA-VAC B.V. will be here when the ship is out of the hands of the yard to support the owner with any problem but also we will support the yard if necessary.

QUA-VAC B.V. will bring the best solution to the yard and owner for a vacuum toilet system that is simple and of high quality.
